DISPOSICIÓN N° **0680**

BUENOS AIRES, **22** ENE 2014

VISTO el Expediente N° 1-47-8358-13-7 del Registro de esta Administración Nacional de Medicamentos, Alimentos y Tecnología Médica (ANMAT), y

CONSIDERANDO:

Que por las presentes actuaciones NEXTMEDICI SRL. solicita se autorice la inscripción en el Registro Productores y Productos de Tecnología Médica (RPPTM) de esta Administración Nacional, de un nuevo producto médico.

Que las actividades de elaboración y comercialización de productos médicos se encuentran contempladas por la Ley 16463, el Decreto 9763/64, y MERCOSUR/GMC/RES. N° 40/00, incorporada al ordenamiento jurídico nacional por Disposición ANMAT N° 2318/02 (TO 2004), y normas complementarias.

Que consta la evaluación técnica producida por el Departamento de Registro.

Que consta la evaluación técnica producida por la Dirección Nacional de Productos Médicos, en la que informa que el producto estudiado reúne los requisitos técnicos que contempla la norma legal vigente, y que los establecimientos declarados demuestran aptitud para la elaboración y el control de calidad del producto cuya inscripción en el Registro se solicita.

Que los datos identificatorios característicos a ser transcritos en los proyectos de la Disposición Autorizante y del Certificado correspondiente, han sido convalidados por las áreas técnicas precedentemente citadas.

Que se ha dado cumplimiento a los requisitos legales y formales que contempla la normativa vigente en la materia.

Que corresponde autorizar la inscripción en el RPPTM del producto médico objeto de la solicitud.

DISPOSICIÓN N° 0680

Que se actúa en virtud de las facultades conferidas por los Artículos 8º, inciso II) y 10º, inciso i) del Decreto 1490/92 y por el Decreto 1271/13.

Por ello;

EL ADMINISTRADOR NACIONAL DE LA ADMINISTRACIÓN NACIONAL DE
MEDICAMENTOS, ALIMENTOS Y TECNOLOGÍA MÉDICA

DISPONE:

ARTICULO 1º- Autorízase la inscripción en el Registro Nacional de Productores y Productos de Tecnología Médica (RPPTM) de la Administración Nacional de Medicamentos, Alimentos y Tecnología Médica del producto médico de marca PENUMBRA, nombre descriptivo PENUMBRA DE COIL SYSTEM/ PENUMBRA COIL 400™(SISTEMA COIL DE PENUMBRA); DETACHMENT HANDLE (MANGO DE DESPRENDIMIENTO) y nombre técnico PRÓTESIS PARA EMBOLIZACIÓN, INTRAVASCULAR, de acuerdo a lo solicitado por NEXTMEDICI SRL., con los Datos Identificatorios Característicos que figuran como Anexo I de la presente Disposición y que forma parte integrante de la misma.

ARTICULO 2º - Autorízanse los textos de los proyectos de rótulo/s y de instrucciones de uso que obran a fojas 182 a 189 y 190 a 200 respectivamente, figurando como Anexo II de la presente Disposición y que forma parte integrante de la misma.

ARTICULO 3º - Extiéndase, sobre la base de lo dispuesto en los Artículos precedentes, el Certificado de Inscripción en el RPPTM, figurando como Anexo III de la presente Disposición y que forma parte integrante de la misma.

ARTICULO 4º - En los rótulos e instrucciones de uso autorizados deberá figurar la leyenda: Autorizado por la ANMAT PM-2120-1, con exclusión de toda otra leyenda no contemplada en la normativa vigente.

ARTICULO 5º- La vigencia del Certificado mencionado en el Artículo 3º será por cinco (5) años, a partir de la fecha impresa en el mismo.

ANEXO I

DATOS IDENTIFICATORIOS CARACTERÍSTICOS del PRODUCTO MÉDICO inscripto en el RPPTM mediante DISPOSICIÓN ANMAT Nº **0680**.....

Nombre descriptivo: Penumbra de Coil System/ Penumbra coil 400™

(Sistema Coil de Penumbra);

Accesorio: Detachment Handle (Mango de desprendimiento).

Código de identificación y nombre técnico UMDNS: 15-034 Prótesis para embolización, intravascular.

Marca(s) de (los) producto(s) médico(s): PENUMBRA.

Modelo: PC 400

Clase de Riesgo: Clase IV.

Indicación/es autorizada/s: El sistema de Coils Penumbra está diseñado específicamente, para excluir aneurismas de la circulación intracraneal, de una manera equivalente a los Coils de embolización desnudo-platino existentes.

El sistema de Coils "Penumbra" está indicado para la embolización endovascular de aneurismas intracraneales, otras anomalías neurovasculares como malformaciones y fístulas arteriovenosas. También están destinadas para embolizaciones arteriales y venosas en la vasculatura periférica. Los coils funcionan para embolizar selectivamente aneurismas o segmentos específicos de la vasculatura mediante el embalaje de una cantidad suficiente de coils "soft" (suaves) de platino para lograr la oclusión.

3.1. Las indicaciones contempladas en el ítem 2 de éste reglamento (Rótulo), salvo las que figuran en los ítem 2.4 y 2.5 (LOTE Y VENCIMIENTO);

- Importado por:
 - ❖ NEXTMEDICI S.R.L.
 - ❖ Av. Álvarez Thomas 28 1º "B" - C1427CCN - C.A.B.A. - Argentina
- Fabricado por:
 - ❖ Penumbra, Inc.
 - ❖ 1351 Harbor Bay Parkway - Alameda, CA 94502 USA
 - ❖ www.penumbrainc.com
- Cantidad: 1 unidad por envase.
- Estéril.
- Utilizar antes de la fecha de caducidad
- Producto médico de un solo uso
- Almacenar en lugar fresco y seco
- "Verifique las instrucciones de uso adjuntas".
- Método de esterilización: Oxido de Etileno
- Director Técnico: Natalia Laura Yusso - MN 13.911
- Producto Médico autorizado por ANMAT PM-2120-1
- "Venta exclusiva a profesionales e instituciones sanitarias"

3.2. Las prestaciones contempladas en el ítem 3 del Anexo de la Resolución GMC N° 72/98 que dispone sobre los Requisitos Esenciales de Seguridad y Eficacia de los Productos Médicos y los posibles efectos secundarios no deseados;

El sistema de espiral Penumbra está compuesto por una espiral Penumbra Coil 400®, una espiral de embolización de platino acoplada a un introductor compuesto con un marcador de posición radiopaco y el mango de liberación Penumbra.

La espiral Penumbra Coil 400® está disponible con las siguientes configuraciones:

- Estándar compleja (marco)
- Suave compleja (llenado)
- Extrasuave compleja (llenado/acabado)
- Suave en J (llenado/acabado)
- Extrasuave curva (llenado/acabado)

La espiral/el introductor viene envasado por separado del mango de liberación.

INDICACIONES DE USO

El sistema de espiral Penumbra está indicado para la embolización endovascular de.

- Aneurismas intracraneales.
- Otras anomalías neurovasculares como malformaciones y fistulas arteriovenosas.
- Embolizaciones arteriales y venosas en la vasculatura periférica.

COMPATIBILIDAD DEL DISPOSITIVO

El sistema de espiral Penumbra es compatible con microcatéteres Penumbra con una luz interior mínima de 0,025 pulgadas (0,635 mm). No se ha establecido la compatibilidad del sistema de espiral Penumbra con otros microcatéteres.

CONTRAINDICACIONES

No existen contraindicaciones conocidas.

3.3. Cuando un producto médico deba instalarse con otros productos médicos o conectarse a los mismos para funcionar con arreglo a su finalidad prevista, debe ser provista de información suficiente sobre sus características para identificar los productos médicos que deberán utilizarse a fin de tener una combinación segura;

PRODUCTOS ACCESORIOS RECOMENDADOS

1. Vaina femoral
2. Es necesario un catéter guía con un diámetro interior mínimo de 0,053 pulgadas (1,35 mm) (se recomienda un catéter guía con un diámetro interior de 0,070 pulgadas [1,78 mm] cuando sea posible)
3. Microcatéter Penumbra con una luz interior mínima de 0,025 pulgadas (0,635 mm)
4. Alambre guía compatible con el microcatéter
5. Válvulas hemostáticas giratorias (VHG)
6. Accesorios de configuración para la irrigación continua
7. Mango de liberación adicional (recomendado)

3.5. La información útil para evitar ciertos riesgos relacionados con la implantación del producto médico;

ADVERTENCIAS

El sistema de espiral Penumbra sólo deben utilizarlo médicos que hayan recibido una formación adecuada en técnicas de neurointervención.

PRECAUCIONES

- El dispositivo está indicado para un solo uso. No reesterilizar ni reutilizar. La reesterilización o la reutilización podrían poner en peligro la integridad estructural del dispositivo o aumentar el riesgo de contaminación o infección, lo que podría dar lugar a fallos en su funcionamiento o infecciones cruzadas y posibles lesiones, enfermedades o la muerte del paciente.
- No usar dispositivos torcidos o dañados. No lo use si los envases están abiertos o dañados.
- Utilizar antes de la fecha de caducidad.
- Utilizar el dispositivo junto con guía fluoroscópica.
- No hacer avanzar ni retraer el dispositivo cuando se produzca resistencia sin realizar una evaluación cuidadosa de la causa mediante fluoroscopia.
- El movimiento o la torsión del dispositivo cuando se presenta resistencia puede dañar el vaso o el dispositivo.
- Mantener una infusión constante de solución de lavado apropiada.

POSIBLES EFECTOS ADVERSOS

Las posibles complicaciones son, entre otras, las siguientes:

- Oclusión aguda
- Embolia aérea
- Muerte
- Embolización distal
- Émbolos
- Formación de un falso aneurisma
- Hematoma o hemorragia en la punción/lugar del acceso/lugar de introducción
- Infección
- Hemorragia intracraneal
- Isquemia
- Déficit neurológicos, incluido accidente cerebrovascular
- Espasmo vascular, trombosis, disección o perforación

MATERIALES

El sistema de espiral Penumbra, el mango de liberación y el envase no contienen látex.

PREPARACIÓN Y USO DEL DISPOSITIVO**CONFIGURACIÓN PARA UNA IRRIGACIÓN CONTINUA**

Para mantener un rendimiento óptimo y reducir el riesgo de episodios de tromboembolismo, es fundamental que se mantenga una infusión continua de la solución de lavado adecuada hacia el interior de la vaina femoral, el catéter guía y el microcatéter.

- Acople una VHG al conector del catéter guía.
- Conecte una llave de tres vías a la salida lateral de la VHG. Conecte una línea de irrigación continua a la llave de paso.
- Acople una VHG al conector del microcatéter.
- Conecte una llave de una vía a la salida lateral de la VHG. Conecte una línea de irrigación continua a la llave de paso.
- Inserte el microcatéter en la VHG conectada al conector del catéter guía.
- Ajuste una presión de irrigación continua para mantener la infusión adecuada de solución durante el procedimiento.
- Compruebe todos los acoplamientos para asegurarse de que no se introduce aire en el sistema.

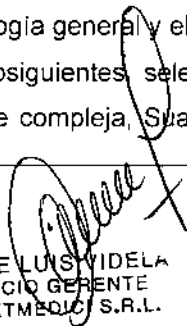

CATETERISMO

- Mediante técnicas de cateterismo convencionales con guía fluoroscópica, acceda al vaso de destino con el catéter guía. El catéter guía debe tener un diámetro interior suficientemente grande para permitir una inyección de contraste suficiente mientras el microcatéter de Penumbra está en su lugar; se necesita un diámetro interior mínimo de 0,053 pulgadas (1,35 mm) para que sea compatible con el microcatéter de Penumbra; un diámetro interior de 0,070 pulgadas (1,78 mm) puede ofrecer un mejor flujo de contraste durante el procedimiento.
- Cateterice con cuidado la lesión con el microcatéter de acuerdo con las instrucciones del fabricante. Una vez que el microcatéter esté en posición, retire el alambre guía.

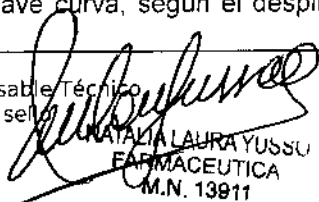

SELECCIÓN DE LA ESPIRAL

- Emplee la técnica fluoroscópica de «road mapping».
- Mida el tamaño del aneurisma que se va a tratar.
- Seleccione una espiral inicial de configuración y tamaño apropiados.
- El diámetro de la primera espiral nunca debe ser inferior al ancho del cuello del aneurisma o puede aumentar la propensión de migración de las espirales.
- Para escoger la espiral óptima para un aneurisma determinado, examine las angiografías anteriores al tratamiento. Se debe elegir el tamaño y la forma apropiados de la espiral basándose en la evaluación angiográfica del diámetro del vaso principal, la cúpula del aneurisma, la morfología general y el cuello del aneurisma.
- Las espirales subsiguientes seleccionadas pueden ser la Estándar compleja, Suave compleja, Extrasuave compleja, Suave en J o Extrasuave curva, según el despliegue de la

espiral precedente y el volumen del aneurisma restante a llenar. Normalmente, las espirales serán de tamaño decreciente hasta que el médico decida que el tratamiento del aneurisma se ha completado con éxito.

0680

INSTRUCCIONES DE USO

1. Extraiga lentamente la espiral y la vaina introductora del aro dispensador. Tenga cuidado para evitar manipular el extremo proximal del introductor. Examine atentamente el introductor de la espiral en busca de daños o irregularidades.
2. El introductor de la espiral se sujeta a la vaina introductora por medio de un bloqueo de fricción. Haga avanzar el introductor más allá del bloqueo de fricción para liberar la espiral. Haga retroceder el introductor hacia la vaina introductora hasta que el bloqueo de fricción encaje para forrar la espiral.
3. Con cuidado, haga avanzar la espiral fuera de la vaina introductora hacia la solución salina heparinizada. Examine la espiral para asegurarse de que no presenta dobleces ni otras irregularidades. Si hay irregularidades, cámbiela por una espiral nueva.

ADVERTENCIA: el uso de espirales dañadas puede afectar la introducción de la espiral o la estabilidad en el interior del aneurisma.

4. Con el extremo distal de la vaina introductora señalando hacia abajo y sumergido en solución salina, retraiga con cuidado la espiral completamente hacia la vaina introductora.
5. Introduzca el extremo distal de la vaina introductora a través de la VHG y hacia el interior del conector del microcatéter, hasta que la vaina introductora quede firmemente asentada en el extremo ahusado del conector. Apriete la VHG alrededor de la vaina introductora para evitar el flujo de sangre retrógrado. No la apriete excesivamente. Si la aprieta en exceso, podría dañarse la espiral o el introductor.
6. Transfiera la espiral hacia el interior del microcatéter haciendo avanzar el introductor de manera suave y continua. Una vez que la parte flexible del introductor haya penetrado en el microcatéter, afloje la VHG y extraiga la vaina introductora sobre el extremo proximal del introductor.

NOTA: para forrar la espiral, retrocargue el introductor en la vaina introductora desde el mismo extremo del que salió y, con el extremo distal de la vaina introductora señalando hacia abajo, retraiga con cuidado la espiral completamente hacia la vaina introductora hasta que el bloqueo de fricción encaje.

7. Apriete la VHG en el introductor para evitar el flujo de sangre retrógrado mientras permite que el introductor continúe avanzando.
8. Verifique visualmente que la infusión de solución de irrigación es normal.
9. Haga avanzar el introductor hasta que el marcador de fluoroscopia de la espiral alcance la VHG. En este momento se debe iniciar la visión fluoroscópica. Vea la Figura 1.

FARMACEUTICA
S.A. 13811

Figura 1

0680

10. Continúe haciendo avanzar la espiral bajo visión fluoroscópica hasta el lugar deseado. Si la colocación de la espiral no es satisfactoria, retraiga lentamente tirando del introductor proximalmente. A continuación, se puede volver a desplegar la espiral. Si el tamaño de la espiral no es el apropiado, retírela y cámbiela por otra del tamaño adecuado.

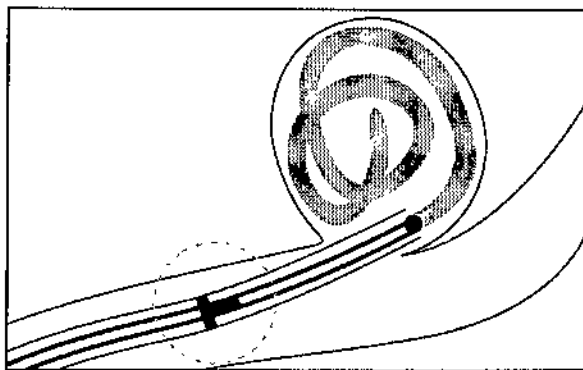

ADVERTENCIA: haga avanzar y retraiga la espiral lentamente. Extraiga la espiral si se observa una fricción inusual. Si se produce la misma fricción inusual con otras espirales, retire el microcatéter y examínelo con atención en busca de daños.

ADVERTENCIA: si se produce resistencia al retraer la espiral, retraiga el microcatéter hasta que disminuya la resistencia.

ADVERTENCIA: no gire el introductor durante su uso. Girar el introductor puede provocar una liberación prematura, lo que podría dar como resultado la migración de la espiral.

11. Continúe haciendo avanzar la espiral hasta que el marcador radiopaco del introductor quede alineado justo más allá del marcador radiopaco proximal del microcatéter para formar una «T». En este punto, el extremo proximal del implante en espiral comienza a sobresalir por la punta del microcatéter. Apriete la VHG en el introductor para evitar más movimientos. Vea la Figura 2.

Figura 2

ADVERTENCIA: verifique constantemente que el microcatéter no se encuentre bajo tensión antes de liberar la espiral.

M.N. 13911

Las fuerzas almacenadas en el microcatéter pueden provocar que la punta se mueva durante la liberación, lo que podría dar lugar a la rotura del aneurisma.

ADVERTENCIA: si se hace avanzar el introductor más allá de la punta del microcatéter, se podría producir la rotura del aneurisma.

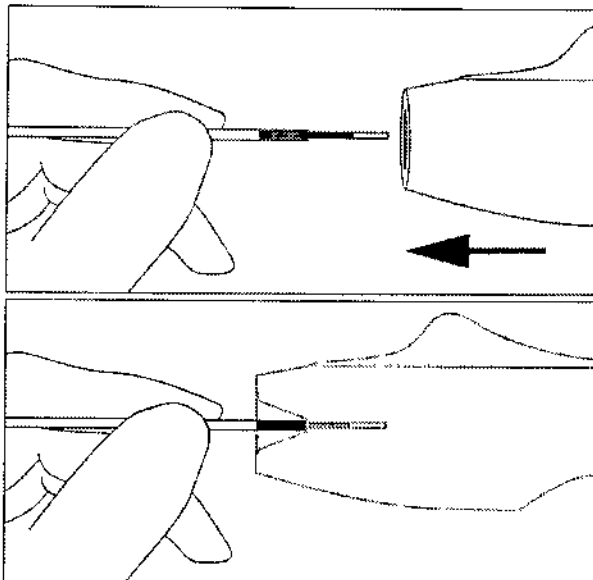

12. Extraiga el mango de liberación de su envase y colóquelo en el campo estéril.

13. Confirme de nuevo que el marcador radiopaco del introductor forma una «T» con el marcador proximal del microcatéter.

NOTA: la liberación de la espiral no depende de la alineación exacta; sin embargo, la alineación del marcador garantizará que el extremo proximal del implante en espiral sobresalga ligeramente de la punta del microcatéter.

14. Sostenga el introductor distalmente a la zona de alineación negra. Haga avanzar el mango de liberación sobre el extremo proximal del introductor hasta que la zona de alineación negra quede totalmente oculta dentro del embudo del mango de liberación y el introductor se detenga dentro del mango de liberación. Vea la Figura 3.

Figura 3

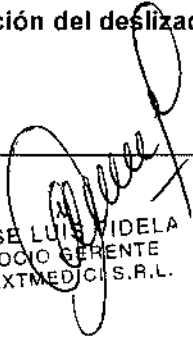

15. Para liberar la espiral, utilice el pulgar para retraer el deslizador del mango de liberación hasta que oiga un clic.

NOTA: una vez que el deslizador haga clic, libérela para permitir que regrese a su posición original.

NOTA: el mecanismo de liberación sólo se activará tras oír el clic, no durante la fase anterior de retracción del deslizador.

16. Tire hacia atrás con cuidado del introductor con guía fluoroscópica para asegurarse de que se ha liberado la espiral.
17. Si la espiral todavía está acoplada, repita los pasos 14 y 15, o bien retire con cuidado la espiral y vuelva a desplegar otra espiral.
18. Repita estos pasos para todas las demás espirales.
19. Una vez que finalice el procedimiento, deseche el mango de liberación.

3.6. La información relativa a los riesgos de interferencia recíproca relacionados con la presencia del producto médico en investigaciones o tratamientos específicos;

CONDICIONALMENTE COMPATIBLE CON LA RM

INFORMACIÓN SOBRE RM

Puebas no clínicas han demostrado que la espiral Penumbra 400[®] es condicionalmente compatible con la RM. Puede someterse a barridos de RM con seguridad en las siguientes condiciones:

- campo magnético estático de 1,5 teslas o 3 teslas
- campo de gradiente espacial de 2.500 gauss/cm o menos (extrapolado)
- Solo modo de funcionamiento normal con un índice de absorción específica promedio de cuerpo entero (WBA SAR) de menos de 2,0 W/kg y un SAR promedio de la cabeza de menos de 3,2 W/kg durante 15 minutos de barrido continuo con la espiral corporal de transmisión o la espiral de cabeza de transmisión
- Se realizó una prueba no clínica, utilizando medición y análisis de simulación in vivo electromagnético, para evaluar el calentamiento in vivo de la espiral Penumbra 400[®]. La espiral 400[®] produjo un aumento de temperatura in vivo estimado < 2,5 °C durante 15 minutos de RM continua en el modo de funcionamiento normal a un WBA SAR de 2,0 W/kg y un SAR promedio de la cabeza de 3,2 W/kg. El estimado del aumento de temperatura es quizás superior al aumento de temperatura real, dado que no incluye los efectos de enfriamiento del flujo de sangre.

INFORMACIÓN SOBRE ARTEFACTOS

La calidad de imagen de la RM puede verse comprometida si la zona de interés se encuentra en el mismo punto o relativamente cerca de la posición ocupada por la espiral Penumbra 400[®]. Por lo tanto, es posible que sea necesario optimizar los parámetros de la imagen de RM para compensar la presencia de este dispositivo.

ANEXO III
CERTIFICADO

Expediente Nº: 1-47-8358-13-7

El Administrador Nacional de la Administración Nacional de Medicamentos, Alimentos y Tecnología Médica (ANMAT) certifica que, mediante la Disposición Nº **0680** y de acuerdo a lo solicitado por NEXTMEDICI SRL., se autorizó la inscripción en el Registro Nacional de Productores y Productos de Tecnología Médica (RPPTM), de un nuevo producto con los siguientes datos identificatorios característicos:

Nombre descriptivo: Penumbra de Coil System/ Penumbra coil 400™
(Sistema Coil de Penumbra);

Accesorio: Detachment Handle (Mango de desprendimiento).

Código de identificación y nombre técnico UMDNS: 15-034 Prótesis para embolización, intravascular.

Marca(s) de (los) producto(s) médico(s): PENUMBRA.

Modelo: PC 400

Clase de Riesgo: Clase IV.

Indicación/es autorizada/s: El sistema de Coils Penumbra está diseñado específicamente, para excluir aneurismas de la circulación intracraneal, de una manera equivalente a los Coils de embolización desnudo-platino existentes.

El sistema de Coils "Penumbra" está indicado para la embolización endovascular de aneurismas intracraneales, otras anomalías neurovasculares como malformaciones y fistulas arteriovenosas. También están destinadas para embolizaciones arteriales y venosas en la vasculatura periférica. Los coils funcionan para embolizar selectivamente aneurismas o segmentos específicos de la vasculatura mediante el embalaje de una cantidad suficiente de coils "soft" (suaves) de platino para lograr la oclusión.

Penumbra Coil System (Sistema Coil de Penumbra)	

Detachment Handle (mango de desprendimiento)	
DH1	Mango de desprendimiento (1 unidad)
DH5	Mango de desprendimiento (5 unidades)

Período de vida útil:

Sistema de coils Penumbra: 5 años.

Mango de esprendimiento: 3 años.

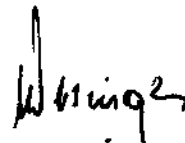

Condición de expendio: Venta exclusiva a profesionales e instituciones sanitarias.

Nombre del fabricante: Penumbra, Inc.

Lugar/es de elaboración: 1351 Harbor Bay Parkway, Alameda, CA 94502, Estados Unidos.

Se extiende a NEXTMEDIDCI S.R.L. el Certificado PM-2120-1, en la Ciudad de Buenos Aires, a...**22.ENE.2014**..., siendo su vigencia por cinco (5) años a contar de la fecha de su emisión.

DISPOSICIÓN Nº **0680**
