10. Contraindicaciones y efectos secundarios

Indicaciones

MonoPlus está indicado para la aproximación general de tejidos blandos cuando se desea un soporte prolongado de la herida (más de 4 semanas).

MonoPlus puede ser utilizado en cirugía pediátrica de tejidos cardiovasculares.

En cirugía vascular, MonoPlus está indicado para suturar vasos periféricos autólogos.

Contraindicaciones

El uso de la sutura MonoPlus está contraindicado en casos en los que se requiera una aproximación de tejidos bajo tensión y para suturar injertos sintéticos como prótesis vasculares o válvulas cardíacas.

Efectos secundarios

Como el resto de los materiales de sutura, el contacto a largo plazo con soluciones salinas, tales como orina y bilis, puede causar litiasis.

Al igual que sucede con todas las suturas, después de su implantación puede causar una irritación local transitoria en el entorno de la herida, una respuesta inflamatoria transitoria a cuerpo extraño e infección. Infecciones existentes pueden también verse agravadas.

Aplicación

La sutura MonoPlus se utilizará según los requerimientos quirúrgicos. Las suturas deben seleccionarse en función del tamaño de la herida, del estado del paciente, de la técnica quirúrgica y de la experiencia del cirujano.

Advertencias y precauciones

Advertencias

MonoPlus no debe reesterilizarse. Los sobres abiertos y no utilizados o dañados deben ser desechados. MonoPlus® no debe utilizarse después de la fecha de caducidad.

Un solo uso: peligro de infección para el paciente o el usuario y limitación de la función de los productos en caso de reutilización. La contaminación o la función limitada de los productos pueden provocar lesiones, enfermedades e incluso la muerte.

El almacenaje no requiere condiciones especiales.

El usuario debe estar familiarizado con las distintas técnicas quirúrgicas antes de usar la sutura MonoPlus. Se debe tener en cuenta que el riesgo de dehiscencia de la herida varía dependiendo del sitio de aplicación y del material de sutura empleado. Como el resto de los materiales de sutura, el contacto a largo plazo con soluciones salinas, tales como orina y bilis, puede causar litiasis. Debe evaluarse el uso de MonoPlus en tejidos de escasa irrigación sanguínea, ya que puede producirse un retraso de la absorción.

La utilización de MonoPlus no está recomendada en pacientes que padecen enfermedades o que están en estados que prolonguen el proceso de cicatrización.

Dado que MonoPlus es una sutura absorbible, el cirujano debe considerar la utilización de suturas adicionales no absorbibles en los lugares sometidos a expansión, estiramiento o distensión o que necesiten soporte adicional.

Medidas de precaución

Antes de emplear MonoPlus, el usuario debe conocer las técnicas quirúrgicas aplicables a las suturas absorbibles monofilares. Al utilizar MonoPlus debe evitarse que los instrumentos quirúrgicos, tales como pinzas o porta-agujas, dañen la sutura. En algunos casos (especialmente en ortopedia), la inmovilización de las articulaciones mediante soportes externos podrá ser empleada como complemento al uso quirúrgico de MonoPlus.

Esterilidad

Las suturas MonoPlus están esterilizadas con óxido de etileno.

Almacenamiento

No requiere condiciones especiales de almacenamiento.
